

Early Childhood Development (ECD) Center Inauguration attended by Building Energy

Building Energy contributed to the building of a new school for the community of Tororo in eastern Uganda and also provided the school with learner material such as furniture and textbooks for the students

Tororo, 18 December 2018 - The life of Tororo community in eastern Uganda has improved since the commencement of operations at the 10MW Tororo Solar North Power Plant in October 2017.

Building Energy's contribution to these improvements is reflected through the maximization of employment and involvement of the local community in order to support the country's developmental objectives and to assisting in its fight against poverty.

On 18 December 2018, Building Energy inaugurated an Early Childhood Development (ECD) center within close proximity of the Tororo Solar North Power Plant. The aim of this initiative is to sustain the local community through a contribution of a new school building. Building Energy also provided the school with learner material such as furniture and textbooks for the students.

The Early Childhood Development center is located in Asignet village on the outskirts of Tororo town in eastern Uganda. The center assists 120 learners, aged from 5 to 13 years old, from the neighboring villages with reading, writing and life skills.

The activities at the center include cognitive activities (such as vocabulary, alphabet, counting, shapes etc.), self-development (such as reading, writing, maths etc.), community outreach and general care for the learners.

The Building Energy team handed over the school building during a ceremony that took place on 18 December 2018.
